

PUMP ANYTHING THAT CAN POUR SAFELY AND RELIABLY

- **Wide selection of materials:**
 - SS - 316 stainless steel
 - AL - Aluminum
 - NSS - Conductive nylon
 - PP - Polypropylene
 - K - PVDF
 - N - Nylon
- **1/4" - 2" sizes —**
flows to 150 U.S. GPM (568 l/m)
- **Patented lube-free air system**
- **Will not stall at slow speeds**
- **Self-priming**
- **Runs dry**

Here is a line of remarkably rugged and durable self-priming, double diaphragm pumps. Lube-free and non-stalling, all models will handle any product that pours, from clear water to highly viscous, abrasive and chemically aggressive materials. Proven to handle suspended solids and abrasives without damage to the product or the pump.

The unique pump design utilizes far fewer parts than other pumps on the market. This results in

longer operating life and easier maintenance at a lower cost.

Since these pumps are driven by compressed air, there is no need for shielded electrical connections or explosion-proof motors. All models can run dry because there are no close fitting or sliding parts in the fluid section. Flow rates can be controlled to produce from zero to maximum flow simply by increasing or decreasing air flow or pressure.

1/4" BOLTED

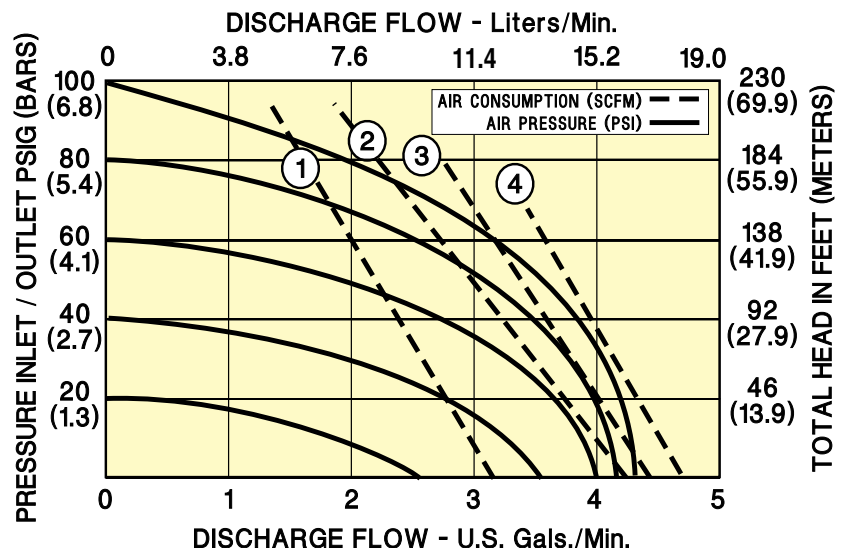

SPECIFICATIONS

- Capacity:**
Adjustable 0 to 4.3 GPM (16.3 liters/min.)
- Maximum temperature:**
PVDF model 200°F (93°C)
Other models 150°F (66°C)
- Maximum air pressure:**
All models 100 PSI (6.8 bars)
- Dry lift capacity @ 100 PSI (6.8 bars):** 15 ft. (4.5 meters)
- Maximum solids:** 1/16" (1.6 mm)
- Air supply:**
Inlet 1/4" NPT
Outlet 1/4" NPT
- Fluid inlet / discharge:** 1/4" NPT

AIR OPERATED DIAPHRAGM PUMP Specifications and ordering information

Material notes:

1. Geolast is a nitrile blend and is a replacement for Buna-N or Neoprene®. Use chemical resistance information for Buna-N.
2. Santoprene is an EPDM blend and is highly resistant to some acids and bases. Use the chemical resistance information for EPDM.
3. Aluminum pumps have polypropylene valve seats, except aluminum w/ TFE models which have nylon valve seats.
4. All pumps built with TFE contain a backup diaphragm of Santoprene.
5. NSSTF pumps are constructed of 316SS filled nylon and include ground / bond lugs.
6. Air system constructed of polypropylene, except nylon and aluminum w/TFE models which have nylon air systems.

General product notes:

1. All pumps are lube-free and non-stalling. A clean, dry compressed air supply is all that is needed.
2. BSP thread models available. Consult Sales Department.
3. Flanges, available on 1½" and 2" sizes only, are slotted for DIN or ANSI compatibility.

PULSATION DAMPENERS

1" MANUAL MODEL

DESIGNED TO ELIMINATE PRESSURE SURGES AND PULSATIONS

- **Non metallic solution contact**
Polypropylene to 125 psig @ 175°F
PVDF to 125 psig @ 225°F
Nylon to 125 psig @ 175°F
- **Manual or automatic adjusting models.**
- **For pump sizes - 1/2", 1" or 2"**
- **Improve accuracy and life of pumps and meters.**
- **Stainless steel clamp band design for easy maintenance.**
- **One-way air inlet valve prevents product backflow if bladder is ruptured.**
- **Eliminates costly pipe system vibration and leakage.**

Pulsation dampeners are uniquely designed to eliminate 97% of all types of fluid flow pressure spikes. The unwanted result of these pressure spikes is hydraulic shock, material foaming or material splashing.

Pulsation dampeners reliably protect diaphragm pumps, pipes, fittings and equipment from vibration and fatigue. Pumps and filter chambers last longer and are more reliable when they are not exposed to harmful fluid shock waves. Installation is easy. Connect to fluid line via tee and supply compressed air or nitrogen to charge the dampener.

The highly efficient dampening provided by these devices makes them ideal for use as a suction stabilizer on all types of pumps or after valves to also protect downstream equipment.

Pulsation dampeners come in two models — Manual adjustment for continuous dampening requirements and Automatic adjusting for variable pump discharge pressures. Models are available in three sizes.

TYPICAL INSTALLATION

SUCTION SIDE -

Dampener acts as an accumulator to provide a close source of product when pump inlet check balls are opened. Helps prevent cavitation. Acts as a dampener when high inlet pressures are generated as pump's inlet check valves are closed. Minimizing stress and shock on pipes, fittings, manifolds and extends diaphragm life.

DISCHARGE SIDE -

Dampener acts as a shock absorber to minimize pulsations and water hammer. Should be mounted as close to pump discharge as possible to absorb shock at its source. Will prevent leaking joints and fittings due to pulsation. Allows meters to be used without damage and extends the life and reliability of pump components.
